Second Biennial Report of Luxembourg under the United Nations Framework Convention on Climate Change addendum to the CTF Tables

31 May 2016

A bug in CTF Reporter leads to missing references and numbering for users' footnotes once tables are exported (in PDF): only the text of the footnotes remains but it is not linked anymore to an entry or a cell of the related table. This short addendum compiles screen captures made in the CTF Reporter so that reviewers can link each footnote with an entry or cell in the corresponding table.					

Table 2

Table 2: Description of quantified economy-wide	emission reduction target "				
Emission reduction target: base year and target					
Base year/ base period ①				1990

- ① Legally binding target trajectories for the period 2013-2020 are enshrined in both the EU-ETS Directive (Directive 2003/87/EC and respective amendments) and the Effort-Sharing Decision (Decision No 406/2009/EC). These legally binding trajectories not only result in a 20% GHG reduction in 2020 compared to 1990 but also define the EU's annual target pathway to reduce EU GHG emissions from 2013 to 2020. The Effort-Sharing Decision sets annual national emission targets for all Member States for the period 2013-2020 for those sectors not covered by the EU emissions trading system (ETS), expressed as percentage changes from 2005 levels. In March 2013, the Commission formally adopted the national annual limits throughout the period for each Member State. By 2020, the national targets will collectively deliver a reduction of around 10% in total EU emissions from the sectors covered compared with 2005 levels. The emission reduction to be achieved from the sectors covered by the EU ETS will be 21% below 2005 emission levels.
- ② See first footnote.
- ③ See first footnote.
- (4) See first footnote.
- (6) As adopted in UNFCCC reporting guidelines for national GHG inventories of Annex | Parties and as adopted under the EU Monitoring Mechanism Regulation.
- (6) As adopted in UNFCCC reporting guidelines for national GHG inventories of Annex I Parties and as adopted under the EU Monitoring Mechanism Regulation.
- 7 As adopted in UNFCCC reporting guidelines for national GHG inventories of Annex | Parties and as adopted under the EU Monitoring Mechanism Regulation
- (8) As adopted in UNFCCC reporting guidelines for national GHG inventories of Annex I Parties and as adopted under the EU Monitoring Mechanism Regulation.
- (9) As adopted in UNFCCC reporting guidelines for national GHG inventories of Annex | Parties and as adopted under the EU Monitoring Mechanism Regulation.
- (1) As adopted in UNFCCC reporting guidelines for national GHG inventories of Annex I Parties and as adopted under the EU Monitoring Mechanism Regulation.
- (1) In principle, the EU ETS should cover CO2 emissions from all flights falling within the aviation activities listed in Annex I of the EU ETS Directive which depart from an aerodrome situated in the territory of a Member State, Norway, Iceland and Liechtenstein and closely related territories, and those which arrive in such an aerodrome from a third country, excluding small commercial emitters. Since 2012, flights to and from aerodromes from other countries have not been included in the EU ETS. This exclusion was taken in order to facilitate negotiation of a global agreement to address aviation emissions in the forum of the International Civil Aviation Organisation (ICAO). The EU has decided on a reduced scope in the 2013–2016 period (Regulation (EU) No 421/2014 of the European Parliament and of the Council of 16 April 2014).
- (2) The EU pledge does not include emissions/removals from Land Use, Land-Use Change and Forestry to deliver its firm independent commitment to reduce greenhouse gas emissions by at least 20% compared to 1990 by 2020. The EU LULUCF sector is however estimated to be a net sink over that period.
- (3) The 2020 Climate and Energy Package allows Certified Emission Reductions (CERs) and Emission Reduction Units (ERUs) to be used for compliance purposes, subject to a number of restrictions in terms of origin and type of project and up to an established limit. In addition, the legislation foresees the possible recognition of units from new market mechanisms. Under the EU ETS the limit does not exceed 50% of the required reduction below 2005 levels. In the sectors not covered by the ETS, annual use shall not exceed to 3 % of each Member States' non-ETS greenhouse gas emissions in 2005. A limited number of Member States may use an additional 1%, from projects in LDCs or SIDS subject to
- (1) The use of these units under the ETS Directive and the Effort Sharing Decision is subject to the limits specified above (footnote 13) which do not separate between CERs and ERUs, but include additional criteria for the use of CERs.
- (§ The use of these units under the ETS Directive and the Effort Sharing Decision is subject to the limits specified above (footnote 13) which do not separate between CERs and ERUs, but include additional criteria for the use of CERs.
- (6) AAUs for the period 2013-2020 have not yet been determined. The EU expects to achieve its 20% target for the period 2013-2020 with the implementation of the ETS Directive and the ESD Decision in the non-ETS sectors, which do not allow the use of AAUs from non-EU Parties.
- (7) At CMP.9, the EU made a declaration, when adopting the Doha amendment to the Kyoto Protocol, that the European Union legislation on 2020 Climate and Energy Package for the implementation of its emission reduction objectives for the period 2013-2020 does not allow the use of surplus AAUs carried over from the first commitment period to meet these
- (a) There are general provisions in place in the EU legislation that allow for the use of such units provided that the necessary legal arrangements for the creation of such units have been put in place in the EU which is not the case at the point in time of the provision of this report.
- (§ None. Luxembourg does not recognise the use of market-based mechanisms other than those under the Convention for the achievements of quantified economy wide emission reduction targets.
- ② In December 2009, the European Council reiterated the conditional offer of the EU to move to a 30% reduction by 2020 compared to 1990 levels as part of a global and comprehensive agreement for the period beyond 2012, provided that other developed countries commit themselves to comparable emission reductions and that developing countries contribute adequately according to their responsibilities and respective capabilities.

Add a footnote

Table 3

- 1 Mitigation impact covers only biogas injection in the national distribution network
- 2 Mitigation impact covers only public buildings (renovation, energy monitoring, new construction concepts for public buildings).
- 3 Mitigation impact is covered by "energy efficiency housing"
- 4 For public buildings, the mitigation impact is covered by "energy efficiency public & commercial services, retail".

Note: Parties may add additional columns for years other than those specified below.

Abbreviation: GHG = greenhouse gas, LULUCF = land use, land-use change and forestry

- ^a Reporting by a developed country Party on the information specified in the common tabular format does not prejudge the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.
- ^b For the base year, information reported on the emission reduction target shall include the following: (a) total GHG emissions, excluding emissions and removals from the LULUCF sector; (b) emissions and/or removals from the LULUCF sector based on the accounting approach applied taking into consideration any relevant decisions of the Conference of the Parties and the activities and/or land that will be accounted for; (c) total GHG emissions, including emissions and removals from the LULUCF sector. For each reported year, information reported on progress made towards the emission reduction targets shall include, in addition to the information noted in paragraphs 9(a–c) of the UNFCCC biennial reporting guidelines for developed country Parties, information on the use of units from market-based mechanisms.
- on Information in this column should be consistent with the information reported in table 4(a) or 4(a) II, as appropriate. The Parties for which all relevant information on the LULUCF contribution is reported in table 1 of this common tabular format can refer to table 1.
- ① Total GHG emissions (excl. NF3) but including domestic and international aviation. Data are coming from the 2016v4 submission generated on 17 May 2016, early evening, and might contain errors generated by persistent small bugs in CRF Reporter.
- 2 Nothing to report because this sector is not included under the Convention target for Luxembourg.
- ③ Use of CERs and ERUs cannot be quantified at the time of reporting (see Table 4(b) footnotes).
- 4 No "other market-based mechanisms" are used by Luxembourg.

Add a faotnata

Table 4(a)I

- 1 2013 nothing to report because this sector is not included under the Convention target for Luxembourg.
- 2 2014 Nothing to report because this sector is not included under the Convention target for Luxembourg.

Add a footnote

Footnotes relate to the entries "Total LULUCF", once for 2013 & once for 2014.

Table 4(b)

- ① 2013 since 2013, it has no longer been possible to track the use of flexible mechanisms in the EU ETS directly through information on the EUTL public website: CERs and ERUs are exchanged into EUAs and cannot be further tracked after that exchange. These exchanges will become public at installation level only two years after transfers have been conducted. Consequently, 2013 exchanges and transfers could only be reported in 2016. The use of flexible mechanisms under the ESD cannot be quantified either at this moment. Indeed, as the compliance assessment for the first year under the ESD (i.e. 2013) will only take place in 2016, any potential use of units for meeting the ESD target in 2013, or being transferred to another Member State in 2013, could only be reported in 2016.
- ② 2014 since 2013, it has no longer been possible to track the use of flexible mechanisms in the EU ETS directly through information on the EUTL public website: CERs and ERUs are exchanged into EUAs and cannot be further tracked after that exchange. These exchanges will become public at installation level only two years after transfers have been conducted. Consequently, 2014 exchanges and transfers could only be reported in 2017. The use of flexible mechanisms under the ESD cannot be quantified either at this moment. Indeed, as the compliance assessment for the first year under the ESD (i.e. 2013) will only take place in 2016, any potential use of units for meeting the ESD target in 2014, or being transferred to another Member State in 2014, could only be reported in 2017.

Footnotes relate to the entries "Total", once for 2013 & once for 2014.
