AGRICULTURAL PRICES -- 1960 ANNUAL SUMMARY

This is the second of a series of annual bulletins assembling in a single volume the latest available monthly and annual price estimates shown currently in Agricultural Prices and in the various annual publications showing Production, Use, and Value.

Prices Received by Farmers

As collected by the U. S. Department of Agriculture, prices received by farmers relate to the average prices they receive for their products--generally at the point of first sale. Points of first sale by farmers may range all the way from sales on a graded, packed, and delivered basis to bulk sales at the farm. The average price concept is that of a price which, if multiplied by the total quantity of the commodity sold, would equal the total sum received by all farmers for that commodity. Since, in general, these estimates are designed to represent the average price received for all sales of a commodity on an "as sold" basis, they do not measure the price of a specific grade, kind, or variety at a common point of sale.

Apples and citrus fruits are exceptions to the "as sold" concept. The apple price series relates to the equivalent packinghouse-door returns for Washington and Oregon, to bulk fruit at first delivery point for California, and to the price "as sold" for other States. Citrus prices relate to equivalent returns at a specific point of sale. The citrus series is omitted from this publication, as revised monthly equivalent returns for the 1959-60 crop will be published as a supplement to the October 1961 issue of Agricultural Prices.

Monthly Prices. Prices for most of the commodities are collected during a 5-day period centered on the 15th of the month, and these prices are used to represent average prices received for sales of the commodity during the month. For some commodities, monthly prices as published currently are reviewed at the end of the season and revised, if necessary, to take into account sales for the entire month. Notable among this group are meat animals and milkfat in cream. For the following commodities the current estimate is defined as a monthly average: Apples, peaches, pears, citrus, potatoes, tobacco, milk sold at wholesale to plants and dealers, broilers, and wool. At the State level prices are estimated only for months in which 0.5 percent or more of annual sales of the commodity are marketed.

Weights for computing monthly regional and United States average prices are as follows: (a) Annual production or sales for hay, all meat animals except beef cattle, milkfat in cream, milk retailed by farmers, and wool. At the end of the marketing year regional and United States wool prices are recomputed, using estimated sales during the month; (b) January 1 inventory numbers for milk cows; (c) estimated marketings during the month for all other commodities.

Season and annual average prices. State season and annual average prices are computed by weighting monthly prices by the estimated proportion of the marketing season or calendar year sales made each month. Regional and U. S. average prices are obtained by weighting State prices by estimated quantities sold in each State. Marketing seasons for each commodity are shown on Pages 162 and 163.

Average Prices Paid by Farmers

Estimates of prices paid by farmers, prepared and published by the Department of Agriculture, reflect the average unit cost of commodities and services commonly bought by farmers. Retail price data are collected from merchants serving local areas, principally by mail surveys. Prices reported are mostly cash quotations, although credit prices may also be reported in instances where sales are made on a credit basis. The items selected are those which are, generally speaking, most important in farmers' expenditure patterns, both for production and family living. For each commodity, respondents are asked to report prices for the size, grade, and quality most commonly sold to farmers. In general, definite specifications are requested only for those items for which specifications are an important factor in determining price. Lumber prices, for example, vary to some extent with length of cut, and substantially with kind and grade. For this reason, prices are requested for specific dimensions, grades, and kinds of lumber. Similarly, prices are collected for dairy feeds of definite protein content, for refrigerators of specific sizes, and for tractors of specified types in specified horsepower categories. On the other hand, quotations of prices paid for rice and many other items are not stratified by kind, grade, or variety, since such factors apparently do not cause substantial price variation.

The normal variation in the specifications of products bought by farmers serving a particular purpose is reflected in reported prices. Men's overcoats, for example, are usually higher priced in the North than in the South, since heavier clothing is ordinarily worn in cooler climates.

Combined average prices paid by farmers at independent and chain stores are shown for food and tobacco, household articles, clothing, household furnishings, building and fencing materials, motor supplies, (Tables 57 through 62) and farm supplies (Table 64). Prices paid for farm machinery (Table 63) and field seeds, feed, fertilizer, spray materials, turkey poults, and baby chicks (Tables 65 through 70) are based primarily upon reports from independent dealers.

Price Indexes

A detailed description of the Index of Prices Received by Farmers, and the Index of Prices Paid by Farmers including Interest, Taxes, and Farm Wage Rates is contained in the following:

Agricultural Handbook No. 118, Major Statistical Series of the U. S. Department of Agriculture, Volume 1, Agricultural Prices and Parity, by B. R. Stauber and R. H. Moats.

Agricultural Economics Research, Vol. XI, No. 2 and 3, April-July 1959, the January 1959 Revision of the Price Indexes, by B. R. Stauber, R. F. Hale, and B. S. Peterson.

1/ The season average price refers to crop of designated year. The monthly prices refer to all potatoes being sold in a given month regardless of the year harvested. Thus the U. S. all-potato price for April 1959 includes sales from the 1958 fall crop and the 1959 winter and 1959 spring crops.
