AGRICULTURAL PRICES - 1980 ANNUAL SUMMARY

This is the 22nd annual bulletin summarizing monthly, season, and annual average price estimates published previously in Agricultural Prices and in various annual publications showing Production, Disposition, and Value. Indexes of Prices Received and Prices Paid by Farmers are shown on an annual basis for 1910 to present and on a monthly basis for 1965 to present.

PRICES RECEIVED BY FARMERS

This series designated Prices Received by Farmers relates to the average prices farmers receive for their products - generally at the point of first sale. Points of first sale by farmers range from sales on a graded, packed and delivered basis to bulk sales at the farm. The average price concept is that price which would result from dividing the total dollars received by all farmers, before any marketing charges are deducted for a commodity, by the total quantity sold. These estimates, except as noted below, do not measure the price of specific grades, kinds, or varieties at a common point of sale.

Milk sold to plants, apples, peaches and citrus fruits are not estimated on the "as sold" basis. Milk is priced f.o.b. plant or receiving station. Apple and peach price series relate to the equivalent packinghouse-door returns for Washington and Oregon, equivalent returns for bulk fruit at first delivery point for California, and the price at point of first sale for other States.

Monthly Prices. Prices shown in the publication for most commodities are estimates of the average prices received by farmers for the entire month. For dry field peas, eggs and turkeys, prices are collected during a 5-day period centered on the 15th of the month. State commodity prices are generally estimated only for months when 0.5 percent or more of the annual sales occur.

Weights for computing monthly United States average prices from State average prices are based on the following: annual sales for dry field peas; January 1 inventory numbers for milk cows; estimated marketings during the month for all other commodities.

State season average prices are computed by weighting monthly prices by the estimated percentage of sales made each month in the marketing season. Preliminary state and U.S. season average prices for 1980 exclude Government program payments and allowances for unredeemed loans and purchases by the Government. Final U.S. season average prices for 1975-79 exclude Government program payments but include an allowance for unredeemed loans and purchases by the Government, valued at the average loan rate. United States season average prices are computed by weighting State season average price by the estimated quantities sold in each State. Marketing seasons by commodity are shown on pages 141 and 142.

State annual average prices are computed by weighting monthly prices by the estimated proportion of the calendar year sales made each month except milk cow prices, which are a simple average. United States average prices are obtained by weighting State annual average prices by estimated quantities sold in each State.

PRICES PAID BY FARMERS

The State, Regional, and U.S. averages of prices paid by farmers for goods and services presented in this summary are based on the voluntary reports of thousands of merchants and dealers throughout the Nation. These estimates of average prices, together with computed indexes and index ratios, relate to transactions about the 15th of the designated month. Price data underlying the estimates are collected from dealers and merchants at regularly recurring intervals by means of mailed inquiries and personal enumeration.

Prices paid by farmers are collected for major production items purchased. Commodities are described or specified as simply as practicable. Reporters are asked to report the price of the most commonly sold item that best fits the questionnaire definition or specification. Specifications vary considerably in amount of detail included. Some must, of necessity, be specific because the presence or absence of a certain feature may have a sizable effect on price. For example, in the case of tractors, horsepower classification and number of drive wheels materially affect price. Other commodities can be described in broad or general terms because various features are easily substitutable or the item has basic standard specifications. An example is "acetylene welder outfit" for which no specification other than "complete" is asked. Dealers are asked to report price of the size, grade, or quality of the item most commonly sold to farmers.

U.S. prices for all items surveyed are published in Agricultural Prices, a monthly release of the Economics and Statistics Service of the U.S. Department of Agriculture. State and Regional prices for feed, seed, fuels and fertilizer are also published in the monthly release. Prices for building materials, farm machinery, farm supplies and pesticides are published at regional levels in the Annual Summary while prices for motor supply items are published at the state level in this release.

Copies of this annual price summary are available
upon request to the United States Department of Agriculture,
Economics and Statistics Service, Washington, D,C, 20250

Update of Base Reference Periods for Indexes of
Prices Received and Paid by Farmers

The standard reference base for major statistical series of the Federal Government is updated approximately every ten years. This is done to: (a) insure that the indexes reflect a current structure of the economy and (b) to facilitate the visual comprehension of rates of change from a base period that is not too distant in time. In 1970 the reference base was changed from 1957-59 to 1967 and indexes on this base have been published since then.

The reference base is now being changed pursuant to the directive issued by the Office of Federal Statistical Policy and Standards, dated March 4, 1980. The year 1977 was chosen because: (a) this coincides with the most recent economic census from which many series are benchmarked and (b) the continued expansion of the economy in 1977 following the recession of 1974-75 was balanced and representative of recent times.

Indexes of Prices Received by Farmers and Indexes of Prices Paid by Farmers for Commodities and Services, Interest, Taxes and Farm Wage Rates have been converted to 1977=100 base for annual indexes back to 1910 and the monthly indexes back to 1965. The converted index series along with comparable indexes on the 1910-14 base (the period prescribed by law) are published in the 1980 Annual Summary of Agricultural Prices.

Since the 1967=100 and the 1977=100 index series are computed directly from the 1910-14 base, a table of conversion factors is provided on page 7 of this report. Anyone interested in maintaining a 1967=100 series can do so by multiplying the 1910-14 index value for a specific commodity group by the 1967=100 conversion factor.

Factors for Converting Index Reference Base

The table below gives the factors needed to convert 1910-14=100 indexes to 1967=100 and to 1977=100 bases. For example, to convert the 1910-14=100 All Farm Products Index for Prices Received by Farmers of 650 to 1967=100, multiply 650 by .40000=260. To convert the same index to 1977=100, multiply 650 by .21886=142.
